

NASA and Meet & Greet Videoconferences

Students from Rawson Sounder College (NC, U.S.A.) and Turk College (Izmir, Turkey) made a videoconference with NASA on Feb 27, 2013. The topic was Toys in Space. NASA expert Scott Anderson made a nice

presentation and shared information with students. Students enjoyed a lot and find chance to share their ideas and toys designs with Mr. Anderson. Both schools' students were able to ask and answer Mr. Anderson's question during the presentation.

Above this boreal landscape, the arc of the Milky Way and shimmering aurora flow through the night. Like an echo, below them lies Iceland's spectacular Godafoss, the Waterfall of the Gods. Shining just below the Milky Way, bright Jupiter is 2013 International Earth and Sky Photo Contest on Dark Skies Importance organized by The World at Night. An evocative record of the beauty of planet Earth's night sky, all the contest's winning entries are featured in this video.
